

Troux Insight

Release 2.0

When it comes to defining and implementing a strategy, businesses have always had tremendous decision-making challenges due to the lack of complete, accurate and timely information.

Enterprise Portfolio Management solutions from Troux help companies make more informed strategy decisions by 'connecting' business context to IT. Troux solutions provide a strategic, 360 degree view of the IT landscape in the context of business. The result: enterprises gain clear line-of-sight and can instantly see how current and future technology strategy decisions impact an organization before they are implemented.

Key Benefits

- Help businesses make more informed decisions that reduce cost, decrease risk and improve agility
- Delivers 360° view of the IT landscape in the context of the business
- Provides decision-makers with the information required to precisely address fundamental business issues
- Uses common business language to organize information into intuitive portfolios and simplify business analysis
- Manages the relationships between Business and IT portfolios to illustrate the impact a decision has across the entire enterprise

Searching for a Better Answer

Troux solutions enable a movement from 'IT Portfolio Management' to a comprehensive 'Enterprise Portfolio Management' approach. With Troux, enterprise IT-related information is categorized into four portfolios (Applications, Investments, Technology, Information) and Business related information into two portfolios (Business Goals and Strategy, Business Architecture).

Capturing and managing information in the context of these portfolios is a critical component in providing visibility and synchronization between business and IT investments.

This approach empowers businesses to analyze and make better decisions across a wide range of operational and transformational initiatives.

Troux Insight, part of the Troux Suite of Enterprise Portfolio Management products, provides a powerful interactive and ad-hoc analysis engine for business analysts. With Troux Insight decision makers gain a better understanding of how decisions affect all the moving parts that make up the connected enterprise. With Troux better insights are gained

across the enterprise to ensure decision-making is done in a controlled manner within the context of the business and its associated strategies.

Key Features

- **Library of over 150 preconfigured visualizations** called ‘perspectives’ help decision makers quickly ‘jump-start’ the analysis process and identify risk areas, as well as opportunities for cost savings and investment re-alignment.

Troux Insight 'Bubble Chart' Perspective

- **Library of business architecture perspectives** supports the ability to define goals and strategies and their weightings, compare strategic value and cost assessments on projects and capabilities to help in investment prioritization, and analyze business products and market value assessments.
- **Custom perspective creator** allows business analysts to create new perspectives on-demand with a simple interactive interface.
- **Wide variety of visualization types** support the ability to easily share and consume analysis across stakeholders. Visualization types include: Data Grids, Bar Charts, Heated Tree Maps, Bubble Charts, Donut Charts, Hierarchy Maps and Timelines.
- **Find and replace data editing** streamlines the ability to locate and edit heavily used data sets.
- **Detail view perspectives and detail editors** supports the ability

to view and edit information in a forms-based view.

- **Filtered lists** ensures up-to-date information is always surfaced in a Perspective by enabling the filtering of data based on dynamic criteria such as “all my Applications”.
- **Folder-based organization** allows users to categorize and associate perspectives, lists and editors in user managed folders, streamlining the navigation and user organization with unique workspaces.
- **Folder-duplication and export** allows users to quickly duplicate or send a folder and all of its content to another Insight user.
- **Folder sharing and privacy settings** simplifies the process of distributing

analysis results and provides an intuitive collaboration for teams.

Folder contents can be set as private, public, or shared with named users or groups. Additionally, read and write permissions can be set to control when users can change the view of perspectives, editors, and collections within a folder.
